

Quick Start Guide

AX3 Logging Accelerometer

AX6 Logging Accelerometer & Gyroscope

OPEN|MOVEMENT

Identification of parts

Item	Description	Notes
1	USB connector	Charging, configuration, downloading
2	Puck enclosure	Made from polycarbonate
3	Orientation arrow	Indicator for location and orientation
4	LED	Device status
5	Serial number	Product type and unique identification
6	Axis diagram	Internal sensor orientation

< 1

Getting started with your AX device

The AX3/AX6 are data logging sensors. To get started, please download and install the configuration software, available via:

<https://openmovement.dev>

How to charge your AX device

The device can be charged by inserting a micro USB cable connected to a 5V power source, such as a powered USB hub or a USB port on a computer. A full charge should take no more than two hours. The device must not be worn while connected to power.

Battery care

In order to protect the lithium ion battery in this product, devices should be stored in a fully charged state in low ambient temperatures. Devices in prolonged storage should be recharged to this level every three months.

< 2

Capturing data with your AX device

Launch the configuration software and connect your device to the computer with a micro USB cable.

The software will show attached devices, their approximate battery status, and whether they contain any stored data. You can configure a new recording to capture data, download existing captured data, or clear the device storage.

For additional information on using your sensor, please visit: <https://openmovement.dev>

Silicone wrist band (optional)

The optional band is a wrist mounted holder for the AX devices. It allows for convenient data collection and is made from from a soft-touch silicone with stainless steel fastenings.

< 3

Using your device with the silicone wrist band

The wrist band features a cavity which allows for easy insertion and removal of the sensor. The band can be worn on the wrist and adjusted as necessary.

1. Locate the arrow on the AX puck and align this with the small arrow on the underside of the band.

2. Gently push the AX puck into the cavity, the silicone will allow it to enter.

3. Fully insert the AX puck until the silicone completely surrounds the device.

FAQ

What if the device will not connect to a computer?

Check that the connector is clean and free of debris. The LED should fade in and out when the device is properly connected.

Is my device waterproof?

The enclosure is designed to meet IP68 rating and be suitable for day to day activities including showering and bathing, but should not be worn for more extreme activities such as diving, swimming, or sauna/steam rooms.
